

Synthetic Longitudinal Patient Record

Anant Sharma | Record DEMO-ANANT-LARGE-2026

A 41-page fictional record created solely for retrieval-augmented generation testing. Every name, date, result, diagnosis, and instruction in this document is invented. This document contains no real patient information and is not medical advice.

Demo field	Value
Primary condition	Jaundice associated with fictional hepatitis A
Record period	18 September 2026 to 26 March 2027
Pages	Cover, clinical sections, 28 monitoring entries, and appendices

1. Patient Identity and Record Scope

Core demographic and record-control information

Anant Sharma is a fictional 34-year-old patient used only for this software demonstration. His synthetic record number is DEMO-ANANT-LARGE-2026. The initial visit date is 18 September 2026.

The record follows a fabricated episode of jaundice from presentation through recovery. It intentionally distributes facts across many pages so a RAG system can demonstrate chunking, semantic retrieval, grounded answers, and page citations.

Field	Recorded value
Patient	Anant Sharma
Age	34 years
Blood group	B positive
Preferred language	English and Hindi

2. Alerts and Allergies

High-priority facts for retrieval testing

The synthetic chart records an allergy to penicillin. The invented reaction is an itchy raised rash that appeared several hours after a childhood dose. No breathing difficulty or loss of consciousness was reported.

There are no recorded food allergies. The chart also states that medicine choices should be checked against the penicillin allergy before prescribing. This alert is repeated only on this page and in the final summary.

Alert	Detail
Medication allergy	Penicillin
Recorded reaction	Delayed itchy raised rash
Severity	Moderate; no fictional history of anaphylaxis

3. Initial Presentation

Symptoms recorded at the first fictional visit

Anant presented with yellow discoloration of the eyes and skin, dark urine, fatigue, mild nausea, and reduced appetite. Symptoms began five days before the first visit.

He did not report confusion, fainting, bleeding, severe abdominal pain, or breathing difficulty. Vital signs were stable, and the synthetic examination described mild tenderness without guarding.

Symptom	First-visit description
Yellow eyes and skin	Present
Dark urine	Present
Fatigue	Moderate
Appetite	Reduced

4. Baseline Laboratory Results

Invented results dated 18 September 2026

The peak total bilirubin in this fictional record was 8.4 mg/dL. Direct bilirubin was 5.1 mg/dL, ALT was 620 U/L, and AST was 410 U/L. These values are demonstration data, not a clinical reference range.

The complete blood count was described as broadly stable. The purpose of these distinct numbers is to test whether the retrieval system can locate exact facts rather than rely on general medical knowledge.

Test	Synthetic result
Total bilirubin	8.4 mg/dL
Direct bilirubin	5.1 mg/dL
ALT	620 U/L
AST	410 U/L

5. Infectious Disease Testing

Fabricated diagnostic work-up

The fictional hepatitis A IgM result was positive. Hepatitis B surface antigen and hepatitis C antibody were recorded as negative. The working diagnosis was jaundice associated with acute hepatitis A.

No real laboratory performed these tests. These deliberately specific results allow questions about the suspected cause of jaundice to be answered from this page.

Test	Synthetic result
Hepatitis A IgM	Positive
Hepatitis B surface antigen	Negative
Hepatitis C antibody	Negative

6. Abdominal Ultrasound

Imaging report dated 20 September 2026

The synthetic abdominal ultrasound described a mildly enlarged liver with uniform echotexture. The gallbladder contained no stones, and the common bile duct was not dilated.

Most importantly for the demo query, the report found no biliary obstruction. The fictional radiologist was Dr Kavita Rao, and the imaging accession code was US-DEMO-2048.

Finding	Report text
Liver	Mildly enlarged; uniform echotexture
Gallbladder	No stones
Bile duct	Not dilated
Obstruction	No biliary obstruction detected

7. Specialist Review

Fictional hepatology consultation

Dr Meera Kapoor reviewed the synthetic record on 21 September 2026. She agreed with the working diagnosis of uncomplicated acute hepatitis A and recommended supportive outpatient management.

The plan emphasized hydration, rest, avoidance of alcohol, and avoidance of unapproved medicines or supplements. Repeat liver function testing was scheduled, with escalation for confusion, bleeding, repeated vomiting, or increasing drowsiness.

Item	Recorded detail
Consultant	Dr Meera Kapoor
Specialty	Hepatology
Management	Supportive outpatient care
Next review	Three days

8. Initial Care Plan

Actions agreed at the start of monitoring

Anant was advised to drink adequate fluids, eat small balanced meals as tolerated, and rest during the symptomatic period. Alcohol was to be avoided completely during recovery.

The fictional plan did not include an antibiotic or a specific antiviral medicine. Urgent review was advised for confusion, unusual bleeding, persistent vomiting, severe abdominal pain, fainting, or inability to drink fluids.

Plan element	Instruction
Hydration	Regular oral fluids
Activity	Rest, then gradual return
Alcohol	Avoid
Follow-up	Serial symptoms and liver tests

9. Weekly Monitoring Entry 1

Synthetic longitudinal follow-up

At monitoring entry 1, dated 25 September 2026, Anant reported fatigue and reduced appetite. The permitted activity level was recorded as rest at home. No confusion, bleeding, or persistent vomiting was documented in this fictional entry.

The synthetic trend value for total bilirubin was 7.2 mg/dL and ALT was 510 U/L. The record describes a steady improvement over time; these values exist only to make longitudinal retrieval testable.

The unique entry reference is MON-20260925-100. The plan was to continue hydration, avoid alcohol, and attend the next scheduled review. No new medicine allergy or emergency event was added.

Monitoring field	Value
Entry date	25 September 2026
Total bilirubin	7.2 mg/dL
ALT	510 U/L
Symptoms	fatigue and reduced appetite
Activity	rest at home
Reference	MON-20260925-100

10. Weekly Monitoring Entry 2

Synthetic longitudinal follow-up

At monitoring entry 2, dated 02 October 2026, Anant reported fatigue and reduced appetite. The permitted activity level was recorded as rest at home. No confusion, bleeding, or persistent vomiting was documented in this fictional entry.

The synthetic trend value for total bilirubin was 6.9 mg/dL and ALT was 491 U/L. The record describes a steady improvement over time; these values exist only to make longitudinal retrieval testable.

The unique entry reference is MON-20261002-101. The plan was to continue hydration, avoid alcohol, and attend the next scheduled review. No new medicine allergy or emergency event was added.

Monitoring field	Value
Entry date	02 October 2026
Total bilirubin	6.9 mg/dL
ALT	491 U/L
Symptoms	fatigue and reduced appetite
Activity	rest at home
Reference	MON-20261002-101

11. Weekly Monitoring Entry 3

Synthetic longitudinal follow-up

At monitoring entry 3, dated 09 October 2026, Anant reported fatigue and reduced appetite. The permitted activity level was recorded as light daily activity. No confusion, bleeding, or persistent vomiting was documented in this fictional entry.

The synthetic trend value for total bilirubin was 6.6 mg/dL and ALT was 472 U/L. The record describes a steady improvement over time; these values exist only to make longitudinal retrieval testable.

The unique entry reference is MON-20261009-102. The plan was to continue hydration, avoid alcohol, and attend the next scheduled review. No new medicine allergy or emergency event was added.

Monitoring field	Value
Entry date	09 October 2026
Total bilirubin	6.6 mg/dL
ALT	472 U/L
Symptoms	fatigue and reduced appetite
Activity	light daily activity
Reference	MON-20261009-102

12. Weekly Monitoring Entry 4

Synthetic longitudinal follow-up

At monitoring entry 4, dated 16 October 2026, Anant reported fatigue and reduced appetite. The permitted activity level was recorded as light daily activity. No confusion, bleeding, or persistent vomiting was documented in this fictional entry.

The synthetic trend value for total bilirubin was 6.3 mg/dL and ALT was 453 U/L. The record describes a steady improvement over time; these values exist only to make longitudinal retrieval testable.

The unique entry reference is MON-20261016-103. The plan was to continue hydration, avoid alcohol, and attend the next scheduled review. No new medicine allergy or emergency event was added.

Monitoring field	Value
Entry date	16 October 2026
Total bilirubin	6.3 mg/dL
ALT	453 U/L
Symptoms	fatigue and reduced appetite
Activity	light daily activity
Reference	MON-20261016-103

13. Weekly Monitoring Entry 5

Synthetic longitudinal follow-up

At monitoring entry 5, dated 23 October 2026, Anant reported mild fatigue. The permitted activity level was recorded as light daily activity. No confusion, bleeding, or persistent vomiting was documented in this fictional entry.

The synthetic trend value for total bilirubin was 6.0 mg/dL and ALT was 434 U/L. The record describes a steady improvement over time; these values exist only to make longitudinal retrieval testable.

The unique entry reference is MON-20261023-104. The plan was to continue hydration, avoid alcohol, and attend the next scheduled review. No new medicine allergy or emergency event was added.

Monitoring field	Value
Entry date	23 October 2026
Total bilirubin	6.0 mg/dL
ALT	434 U/L
Symptoms	mild fatigue
Activity	light daily activity
Reference	MON-20261023-104

14. Weekly Monitoring Entry 6

Synthetic longitudinal follow-up

At monitoring entry 6, dated 30 October 2026, Anant reported mild fatigue. The permitted activity level was recorded as light daily activity. No confusion, bleeding, or persistent vomiting was documented in this fictional entry.

The synthetic trend value for total bilirubin was 5.7 mg/dL and ALT was 415 U/L. The record describes a steady improvement over time; these values exist only to make longitudinal retrieval testable.

The unique entry reference is MON-20261030-105. The plan was to continue hydration, avoid alcohol, and attend the next scheduled review. No new medicine allergy or emergency event was added.

Monitoring field	Value
Entry date	30 October 2026
Total bilirubin	5.7 mg/dL
ALT	415 U/L
Symptoms	mild fatigue
Activity	light daily activity
Reference	MON-20261030-105

15. Weekly Monitoring Entry 7

Synthetic longitudinal follow-up

At monitoring entry 7, dated 06 November 2026, Anant reported mild fatigue. The permitted activity level was recorded as usual activity. No confusion, bleeding, or persistent vomiting was documented in this fictional entry.

The synthetic trend value for total bilirubin was 5.3 mg/dL and ALT was 396 U/L. The record describes a steady improvement over time; these values exist only to make longitudinal retrieval testable.

The unique entry reference is MON-20261106-106. The plan was to continue hydration, avoid alcohol, and attend the next scheduled review. No new medicine allergy or emergency event was added.

Monitoring field	Value
Entry date	06 November 2026
Total bilirubin	5.3 mg/dL
ALT	396 U/L
Symptoms	mild fatigue
Activity	usual activity
Reference	MON-20261106-106

16. Weekly Monitoring Entry 8

Synthetic longitudinal follow-up

At monitoring entry 8, dated 13 November 2026, Anant reported mild fatigue. The permitted activity level was recorded as usual activity. No confusion, bleeding, or persistent vomiting was documented in this fictional entry.

The synthetic trend value for total bilirubin was 5.0 mg/dL and ALT was 377 U/L. The record describes a steady improvement over time; these values exist only to make longitudinal retrieval testable.

The unique entry reference is MON-20261113-107. The plan was to continue hydration, avoid alcohol, and attend the next scheduled review. No new medicine allergy or emergency event was added.

Monitoring field	Value
Entry date	13 November 2026
Total bilirubin	5.0 mg/dL
ALT	377 U/L
Symptoms	mild fatigue
Activity	usual activity
Reference	MON-20261113-107

17. Weekly Monitoring Entry 9

Synthetic longitudinal follow-up

At monitoring entry 9, dated 20 November 2026, Anant reported improving energy. The permitted activity level was recorded as usual activity. No confusion, bleeding, or persistent vomiting was documented in this fictional entry.

The synthetic trend value for total bilirubin was 4.7 mg/dL and ALT was 358 U/L. The record describes a steady improvement over time; these values exist only to make longitudinal retrieval testable.

The unique entry reference is MON-20261120-108. The plan was to continue hydration, avoid alcohol, and attend the next scheduled review. No new medicine allergy or emergency event was added.

Monitoring field	Value
Entry date	20 November 2026
Total bilirubin	4.7 mg/dL
ALT	358 U/L
Symptoms	improving energy
Activity	usual activity
Reference	MON-20261120-108

18. Weekly Monitoring Entry 10

Synthetic longitudinal follow-up

At monitoring entry 10, dated 27 November 2026, Anant reported improving energy. The permitted activity level was recorded as usual activity. No confusion, bleeding, or persistent vomiting was documented in this fictional entry.

The synthetic trend value for total bilirubin was 4.4 mg/dL and ALT was 339 U/L. The record describes a steady improvement over time; these values exist only to make longitudinal retrieval testable.

The unique entry reference is MON-20261127-109. The plan was to continue hydration, avoid alcohol, and attend the next scheduled review. No new medicine allergy or emergency event was added.

Monitoring field	Value
Entry date	27 November 2026
Total bilirubin	4.4 mg/dL
ALT	339 U/L
Symptoms	improving energy
Activity	usual activity
Reference	MON-20261127-109

19. Weekly Monitoring Entry 11

Synthetic longitudinal follow-up

At monitoring entry 11, dated 04 December 2026, Anant reported improving energy. The permitted activity level was recorded as usual activity. No confusion, bleeding, or persistent vomiting was documented in this fictional entry.

The synthetic trend value for total bilirubin was 4.1 mg/dL and ALT was 320 U/L. The record describes a steady improvement over time; these values exist only to make longitudinal retrieval testable.

The unique entry reference is MON-20261204-110. The plan was to continue hydration, avoid alcohol, and attend the next scheduled review. No new medicine allergy or emergency event was added.

Monitoring field	Value
Entry date	04 December 2026
Total bilirubin	4.1 mg/dL
ALT	320 U/L
Symptoms	improving energy
Activity	usual activity
Reference	MON-20261204-110

20. Weekly Monitoring Entry 12

Synthetic longitudinal follow-up

At monitoring entry 12, dated 11 December 2026, Anant reported improving energy. The permitted activity level was recorded as usual activity. No confusion, bleeding, or persistent vomiting was documented in this fictional entry.

The synthetic trend value for total bilirubin was 3.8 mg/dL and ALT was 301 U/L. The record describes a steady improvement over time; these values exist only to make longitudinal retrieval testable.

The unique entry reference is MON-20261211-111. The plan was to continue hydration, avoid alcohol, and attend the next scheduled review. No new medicine allergy or emergency event was added.

Monitoring field	Value
Entry date	11 December 2026
Total bilirubin	3.8 mg/dL
ALT	301 U/L
Symptoms	improving energy
Activity	usual activity
Reference	MON-20261211-111

21. Weekly Monitoring Entry 13

Synthetic longitudinal follow-up

At monitoring entry 13, dated 18 December 2026, Anant reported no active symptoms. The permitted activity level was recorded as usual activity. No confusion, bleeding, or persistent vomiting was documented in this fictional entry.

The synthetic trend value for total bilirubin was 3.5 mg/dL and ALT was 282 U/L. The record describes a steady improvement over time; these values exist only to make longitudinal retrieval testable.

The unique entry reference is MON-20261218-112. The plan was to continue hydration, avoid alcohol, and attend the next scheduled review. No new medicine allergy or emergency event was added.

Monitoring field	Value
Entry date	18 December 2026
Total bilirubin	3.5 mg/dL
ALT	282 U/L
Symptoms	no active symptoms
Activity	usual activity
Reference	MON-20261218-112

22. Weekly Monitoring Entry 14

Synthetic longitudinal follow-up

At monitoring entry 14, dated 25 December 2026, Anant reported no active symptoms. The permitted activity level was recorded as usual activity. No confusion, bleeding, or persistent vomiting was documented in this fictional entry.

The synthetic trend value for total bilirubin was 3.2 mg/dL and ALT was 263 U/L. The record describes a steady improvement over time; these values exist only to make longitudinal retrieval testable.

The unique entry reference is MON-20261225-113. The plan was to continue hydration, avoid alcohol, and attend the next scheduled review. No new medicine allergy or emergency event was added.

Monitoring field	Value
Entry date	25 December 2026
Total bilirubin	3.2 mg/dL
ALT	263 U/L
Symptoms	no active symptoms
Activity	usual activity
Reference	MON-20261225-113

23. Weekly Monitoring Entry 15

Synthetic longitudinal follow-up

At monitoring entry 15, dated 01 January 2027, Anant reported no active symptoms. The permitted activity level was recorded as usual activity. No confusion, bleeding, or persistent vomiting was documented in this fictional entry.

The synthetic trend value for total bilirubin was 2.9 mg/dL and ALT was 244 U/L. The record describes a steady improvement over time; these values exist only to make longitudinal retrieval testable.

The unique entry reference is MON-20270101-114. The plan was to continue hydration, avoid alcohol, and attend the next scheduled review. No new medicine allergy or emergency event was added.

Monitoring field	Value
Entry date	01 January 2027
Total bilirubin	2.9 mg/dL
ALT	244 U/L
Symptoms	no active symptoms
Activity	usual activity
Reference	MON-20270101-114

24. Weekly Monitoring Entry 16

Synthetic longitudinal follow-up

At monitoring entry 16, dated 08 January 2027, Anant reported no active symptoms. The permitted activity level was recorded as usual activity. No confusion, bleeding, or persistent vomiting was documented in this fictional entry.

The synthetic trend value for total bilirubin was 2.5 mg/dL and ALT was 225 U/L. The record describes a steady improvement over time; these values exist only to make longitudinal retrieval testable.

The unique entry reference is MON-20270108-115. The plan was to continue hydration, avoid alcohol, and attend the next scheduled review. No new medicine allergy or emergency event was added.

Monitoring field	Value
Entry date	08 January 2027
Total bilirubin	2.5 mg/dL
ALT	225 U/L
Symptoms	no active symptoms
Activity	usual activity
Reference	MON-20270108-115

25. Weekly Monitoring Entry 17

Synthetic longitudinal follow-up

At monitoring entry 17, dated 15 January 2027, Anant reported no active symptoms. The permitted activity level was recorded as usual activity. No confusion, bleeding, or persistent vomiting was documented in this fictional entry.

The synthetic trend value for total bilirubin was 2.2 mg/dL and ALT was 206 U/L. The record describes a steady improvement over time; these values exist only to make longitudinal retrieval testable.

The unique entry reference is MON-20270115-116. The plan was to continue hydration, avoid alcohol, and attend the next scheduled review. No new medicine allergy or emergency event was added.

Monitoring field	Value
Entry date	15 January 2027
Total bilirubin	2.2 mg/dL
ALT	206 U/L
Symptoms	no active symptoms
Activity	usual activity
Reference	MON-20270115-116

26. Weekly Monitoring Entry 18

Synthetic longitudinal follow-up

At monitoring entry 18, dated 22 January 2027, Anant reported no active symptoms. The permitted activity level was recorded as usual activity. No confusion, bleeding, or persistent vomiting was documented in this fictional entry.

The synthetic trend value for total bilirubin was 1.9 mg/dL and ALT was 187 U/L. The record describes a steady improvement over time; these values exist only to make longitudinal retrieval testable.

The unique entry reference is MON-20270122-117. The plan was to continue hydration, avoid alcohol, and attend the next scheduled review. No new medicine allergy or emergency event was added.

Monitoring field	Value
Entry date	22 January 2027
Total bilirubin	1.9 mg/dL
ALT	187 U/L
Symptoms	no active symptoms
Activity	usual activity
Reference	MON-20270122-117

27. Weekly Monitoring Entry 19

Synthetic longitudinal follow-up

At monitoring entry 19, dated 29 January 2027, Anant reported no active symptoms. The permitted activity level was recorded as usual activity. No confusion, bleeding, or persistent vomiting was documented in this fictional entry.

The synthetic trend value for total bilirubin was 1.6 mg/dL and ALT was 168 U/L. The record describes a steady improvement over time; these values exist only to make longitudinal retrieval testable.

The unique entry reference is MON-20270129-118. The plan was to continue hydration, avoid alcohol, and attend the next scheduled review. No new medicine allergy or emergency event was added.

Monitoring field	Value
Entry date	29 January 2027
Total bilirubin	1.6 mg/dL

Activity	usual activity
Reference	MON-20270312-124

34. Weekly Monitoring Entry 26

Synthetic longitudinal follow-up

At monitoring entry 26, dated 19 March 2027, Anant reported no active symptoms. The permitted activity level was recorded as usual activity. No confusion, bleeding, or persistent vomiting was documented in this fictional entry.

The synthetic trend value for total bilirubin was 0.7 mg/dL and ALT was 35 U/L. The record describes a steady improvement over time; these values exist only to make longitudinal retrieval testable.

The unique entry reference is MON-20270319-125. The plan was to continue hydration, avoid alcohol, and attend the next scheduled review. No new medicine allergy or emergency event was added.

Monitoring field	Value
Entry date	19 March 2027
Total bilirubin	0.7 mg/dL
ALT	35 U/L
Symptoms	no active symptoms
Activity	usual activity
Reference	MON-20270319-125

35. Weekly Monitoring Entry 27

Synthetic longitudinal follow-up

At monitoring entry 27, dated 26 March 2027, Anant reported no active symptoms. The permitted activity level was recorded as usual activity. No confusion, bleeding, or persistent vomiting was documented in this fictional entry.

The synthetic trend value for total bilirubin was 0.7 mg/dL and ALT was 28 U/L. The record describes a steady improvement over time; these values exist only to make longitudinal retrieval testable.

The unique entry reference is MON-20270326-126. The plan was to continue hydration, avoid alcohol, and attend the next scheduled review. No new medicine allergy or emergency event was added.

Monitoring field	Value
Entry date	26 March 2027
Total bilirubin	0.7 mg/dL
ALT	28 U/L
Symptoms	no active symptoms
Activity	usual activity
Reference	MON-20270326-126

36. Weekly Monitoring Entry 28

Synthetic longitudinal follow-up

At monitoring entry 28, dated 02 April 2027, Anant reported no active symptoms. The permitted activity level was recorded as usual activity. No confusion, bleeding, or persistent vomiting was documented in this fictional entry.

The synthetic trend value for total bilirubin was 0.7 mg/dL and ALT was 28 U/L. The record describes a steady improvement over time; these values exist only to make longitudinal retrieval testable.

The unique entry reference is MON-20270402-127. The plan was to continue hydration, avoid alcohol, and attend the next scheduled review. No new medicine allergy or emergency event was added.

Monitoring field	Value
Entry date	02 April 2027
Total bilirubin	0.7 mg/dL
ALT	28 U/L
Symptoms	no active symptoms
Activity	usual activity
Reference	MON-20270402-127

37. Recovery Milestone

Resolution of the fictional acute episode

By the 60-day milestone, yellow discoloration and dark urine were recorded as resolved. Appetite and energy had returned to baseline, and Anant had resumed usual daily activity.

The chart retained the penicillin allergy alert. Continued avoidance of alcohol was recommended until the planned clinician review, even though the synthetic laboratory trend had normalized.

Milestone	Outcome
Jaundice symptoms	Resolved
Energy	Returned to baseline
Activity	Usual activity resumed

38. Consolidated Laboratory Trend

Selected values from the demonstration timeline

The invented laboratory series shows a declining trend rather than a real clinical dataset. The peak total bilirubin was 8.4 mg/dL on 18 September 2026 and the final listed value was 0.7 mg/dL.

This summary exists to test whether retrieval can distinguish the peak value from the final value and return the correct page citation.

Date	Total bilirubin
18 September 2026	8.4 mg/dL (peak)
16 October 2026	6.0 mg/dL
27 November 2026	4.1 mg/dL
26 March 2027	0.7 mg/dL (final listed)

39. Final Follow-up and Discharge

Closing fictional review dated 26 March 2027

At the final follow-up, Anant was described as well, with no jaundice, dark urine, nausea, or unusual fatigue. The synthetic episode was marked resolved, and routine follow-up was advised.

The discharge confirmation phrase is SUNFLOWER-4827. This unusual phrase is intentionally included as a precise retrieval target for the RAG demonstration.

Field	Closing value
Episode status	Resolved
Final review date	26 March 2027
Discharge phrase	SUNFLOWER-4827

40. Final Clinical Summary and Demo Questions

Key facts and suggested retrieval checks

Anant Sharma is a fictional 34-year-old patient whose demonstration record describes jaundice associated with acute hepatitis A. Peak total bilirubin was 8.4 mg/dL. Ultrasound found no biliary obstruction. Dr Meera Kapoor provided the specialist review.

The chart records a penicillin allergy with a delayed itchy rash. The episode was marked resolved on 26 March 2027, and the discharge confirmation phrase was SUNFLOWER-4827.

Suggested questions: What medication is Anant allergic to? What was his peak bilirubin? Did ultrasound show an obstruction? Who reviewed him? What was the discharge confirmation phrase? What date was the episode marked resolved?

Reminder	This entire document is synthetic demo data.
